

Physical Review Volume 33 (Paperback)

Filesize: 2.6 MB

Reviews

Just no words to explain. it was actually writtern quite perfectly and valuable. Your daily life period will be convert as soon as you total looking at this pdf.

(Mr. Brook Marquardt Jr.)

PHYSICAL REVIEW VOLUME 33 (PAPERBACK)

To read **Physical Review Volume 33 (Paperback)** PDF, you should refer to the button below and download the ebook or have access to other information which might be related to PHYSICAL REVIEW VOLUME 33 (PAPERBACK) book.

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1911 Excerpt: .the value of dn from (1) and integrating, and then substituting the value of K from (2) we have $\cosh a$ where n is the number of molecules in unit volume. Since it is the thermal agitation of the molecules which opposes the action of H , if there were no thermal agitation--i. e., if the substance were at absolute zero--the intensity of magnetization would be a maximum and we would have $I_m = nM$. Hence For paramagnetic substances, a is very small--much less than unity. $\cosh a \approx 1 + \frac{a^2}{2}$ For values of a less than n^2 , $-7--r--$ can be developed into a convergent series as follows: $\cosh a \approx 1 + \frac{a^2}{2} + \frac{a^4}{24} + \frac{a^6}{720} + \dots$ $\sinh a \approx a + \frac{a^3}{6} + \frac{a^5}{120} + \dots$ For values of a less than 0.7, the terms of this series involving higher powers of a than the first are negligible, and we have $M = \frac{2n^2 \mu H}{3RT} = kH$. where k is constant for constant temperature, k is the paramagnetic susceptibility and is seen to be inversely proportional to T , as found by Curie experimentally. In the case of ferromagnetic substances we have, in addition to the external field, an internal or molecular field, H_m . If this field acted alone, the intensity of magnetization would be proportional to it and we would have $H_m = NI$, and $M = \frac{2n^2 \mu H_m}{3RT} = \frac{2n^2 \mu NI}{3RT}$ where N is the factor of proportionality. Equation (4) shows that at any given temperature J is proportional to a . For any temperature below that...
