WATER-QUALITY DATA FOR STREAMS IN THE UPPER PRICKLY PEAR CREEK WATERSHED, MONTANA, 2001 By Joanna N. Thamke and David A. Nimick INTRODUCTION This section of the report presents water-quality and associated hydrologic data that were collected by the USGS in the upper Prickly Pear Creek watershed during the period March through August 2001. Data presented in this section of the report include measurements of streamflow, water quality, and quality assurance. SITE IDENTIFICATION A site number is used as the primary identification for sampling sites (fig. 1, table 1). The alpha-numeric identification allows for ease of cross reference between tables and figures. The alpha characters denote the first letters of the stream or watershed name. The numeric characters denote the downstream sequence, beginning at the most upstream site. A final alpha character (a, b, c, or d) in some of the site numbers denotes the sequence that the sites were added to the original site list. Table 1.
